

Company Profile

Lafarge North America is part of the Lafarge Group. The world leader in building materials, active on five continents, the Lafarge Group holds top-ranking positions in all four of its divisions – cement, aggregates and concrete, roofing and gypsum.

By focusing on the development and improvement of building materials, Lafarge puts the customer at the core of its strategy and offers the construction industry and the general public innovative solutions that will bring more safety, comfort and beauty to our everyday lives.

Limited Warranty

Lafarge warrants that Lafarge PozzMod Plus meets the requirements of ASTM C 595 and AASHTO M 240. Lafarge makes no other warranty, whether of merchantability or fitness for a particular purpose with respect to Lafarge PozzMod Plus. Having no control over its use, Lafarge will not guarantee finished work in which Lafarge PozzMod Plus is used.

Please contact your Lafarge Office for specific product information, availability and ordering.

LAFARGE

PozzMod Plus™

Added value through improved strengths and finishability.

Lafarge PozzMod Plus™

PozzMod Plus is a Type I(PM) blended cement meeting the requirements of ASTM C 595 and AASHTO M 240. This interground blend of portland cement and a premium pozzolan is suitable for use in virtually all concrete and concrete products applications. Enhanced strength and workability characteristics can be achieved using **PozzMod Plus**.

As part of its ongoing efforts to improve product performance, Lafarge North America has enhanced the Pozzmod product originally introduced by Blue Circle North America. Enhancements by Lafarge have resulted in improved strengths and finishability for added value to the customer. The name has been changed to PozzMod Plus to reflect these improvements.

PozzMod Plus can be combined with fly ash, slag or other supplementary cementitious materials (SCMs) to maximize performance.

Extensive testing by Lafarge has verified that long-term durability characteristics will provide years of satisfactory service.

This product is manufactured at Lafarge's Tulsa, Oklahoma production facility. Consistent performance is assured by adhering to a strict quality assurance program which includes testing at each stage of the manufacturing process.

Conservation of our natural resources is also accomplished by using this product. The incorporation of coal combustion products into this cement provides an environmentally friendly alternative to the use of normal portland cement.

PozzMod Plus is compatible with conventional concrete admixtures and requires no special tools or methods as compared to normal portland cement.

Performance for demanding precast applications can be achieved with PozzMod Plus.

Benefits in Fresh Concrete:

- Improved workability
- Improved flowability
- Improved finishability
- Improved pumpability

Benefits in Hardened Concrete:

- Improved early and ultimate strength of concrete – both compressive and flexural
- Improved cement efficiencies

Improved pumpability can be achieved with PozzMod Plus.

Demanding construction schedules can be met using PozzMod Plus.
