

Lafarge TerraFlow™

LAFARGE

An engineered solution for backfilling in underground mines.

LAFARGE TERRAFLOW™

Product Description

TerraFlow is a specialized blend of cementitious and other construction materials that allows for more efficient and cost effective backfilling in underground mines. It is formulated to work with mine backfill material to meet the unique needs of the underground mining industry and is not suitable for use in concrete or concrete product applications. TerraFlow can be custom blended for a given mine based on local conditions.

Benefits of TerraFlow:

- Allows for more efficient and cost effective backfilling in underground mines
- Optimizes use/reuse of material, including cementitious byproducts
- Pre-blended before arriving on site to promote maximum working efficiency
- Blend proportions may be varied according to specific requirements as determined by preliminary testing
- Saves energy and natural resources
- Cost savings

TerraFlow is produced using stringent quality control procedures. Product claims are based on proper use in accordance with recognized industry standards. Please contact your Lafarge representative for assistance.

Precautions

Direct contact with wet cement should be avoided. If contact occurs, the skin should be washed with water as soon as possible. Exposure can cause serious, potentially irreversible tissue destruction in the form of chemical (caustic) burns. If cement gets into the eyes, immediately rinse thoroughly with water and seek medical attention. For more information, reference the applicable Lafarge Material Safety Data Sheet (MSDS). The MSDS should be consulted prior to use of this product and is available upon request and online at www.lafarge-na.com.
